MODEL #MBHC-2032

Ideal Uses

The Banquet Hot Food Carrier is used to transport assembled hot food plates and covers from assembly table to the banquet dining areas.

The cart is compact and may be wheeled between tables. The food may then be served directly from the cart to the seated patron. This service is fast and efficient, eliminating unnecessary steps and motions. Service confusion and noise are also minimized.

After the banquet the cart is used as a utility and bus cart performing a multi-purpose job. This cart is attractively decorated and the formica surfaces are usable without tablecloths and cleanup is simple.
